Nordia Media Point

Product Overview
Nordia Media Point is a fully integrated browser based software system developed in Java and Web technologies. It delivers a truly modern and stable platform for all users - from data entry, workflow to integrated management reports in a single application.

The software can be installed on existing infrastructure and depending on deployment method requires absolutely no extra software or hardware licenses. Nordia always encourages customers to leverage existing platforms and environments whenever possible.

As a Company
Since 2001 Nordia has delivered products and services to the publishing industry. The company is based in London.

Nordia is a **not a vendor partner or reseller** and makes no money selling external products or licenses other than its own. Therefore you can always trust Nordia for impartial and objective advise and services.

What does it look like?

Screen Description	Sample Screens
Welcome and Login Screen Displays licensing information and login prompt.	
User Login Summary Lists user access and navigation menu with all options available to the user and their respective system privileges.	

Sample Search Screen Information is listed (20 records per page) with complete sorting of data by clicking on row headers. This data listing approach is standard across all system searches and data listings.	
Screen Validation Errors and warnings are displayed when entries appear incorrect or suspect in any way.	
PDF Reports Data can be viewed on screen and exported to PDF format for viewing, printing or archiving.	
Screen Layout To configure, manage, cancel and assign new payments.	

System Privileges Using groups and roles to assign granular system privileges for fine grained system security.	
Documentation The system is fully documented and supported with a detailed manual available in PDF format as standard.	

Installation Requirements

Nordia Media Point is normally installed on a Windows PC or Linux Server with the database installed on the same hardware. For small to medium sized companies Nordia suggests using MySQL which is free. For larger systems with a large number of transactions Nordia recommends Oracle database version 9 or higher.

Alternatively, the system can be provided as a remote installation on a virtual server with absolutely no installation requirements on client site.

Recent Version Update:
Nordia Media Point has undergone testing on Window7 and is now fully compliant.
